

Web Automation Lab Guide

Selenium IDE & Katalon Recorder Implementation Guide

1. Installing Selenium IDE

1. Open your web browser (**Google Chrome** or **Mozilla Firefox**).
2. Navigate to the extension store for your browser:
 - **Chrome:** Chrome Web Store (Search for `Selenium IDE`)
 - **Firefox:** Firefox Browser Add-ons (Search for `Selenium IDE`)
3. Click **Add to Chrome** / **Add to Firefox** to install.
4. Once installed, pin the extension to your toolbar and click the blue `Se` icon to confirm it opens properly.

2. Record Flipkart Search Test (Selenium IDE)

1. Launch **Selenium IDE** from your browser toolbar.
2. Select **Record a new test in a new project**, enter project name (e.g., `Flipkart Automation`), and set base URL to `https://www.flipkart.com` .
3. Click **START RECORDING**. A new browser window will open automatically.
4. Perform the following interactions:
 - Navigate to the Flipkart homepage (close sign-in modal if prompted).
 - Click the search bar, type `headphones` , and press **Enter**.
 - Wait for search results to load, then click on the **first product link**.
5. Return to Selenium IDE and click the red **Stop Recording** button. Name the test case `Search_Headphones` .

3. Record Instagram Login Error Test (Selenium IDE)

1. In Selenium IDE, click **+** to add a new test case named `Instagram_Login_Error` .
2. Click **Record** and set the URL to `https://www.instagram.com/accounts/login/` .
3. In the browser window:
 - Enter dummy credentials into the **Username** field (`testuser12345`) and **Password** field (`wrongpassword123`).
 - Click **Log in** and wait for the error message to appear.
4. **Verification Command:**
 - Right-click the error message text → **Selenium IDE** → **Verify** → **Text**.
 - Or manually add command: Command: `verify text` | Target: `xpath=//p[@aria-live='assertive']` | Value: `[Error text]`
5. Click **Stop Recording** and execute the test to ensure verification passes.

4. Record Zomato Search & Capture Screenshot (Katalon Recorder)

1. Install and launch **Katalon Recorder** from your browser toolbar.
2. Create a **New Test Case** named `Zomato_Pizza_Screenshot`.
3. Click **Record** and navigate to `https://www.zomato.com`.
4. Type `pizza` into the primary search bar and submit the search.
5. After the results page renders, manually append a screenshot step in Katalon Recorder:
 - **Command:** `captureEntirePageScreenshot` (or `takeScreenshot`)
 - **Target:** `zomato_search_results.png`
6. Click **Stop** and run the test to verify execution and image file output.

5. Non-Programmer Automation Use Cases & Limitations

Automation Task	Description	No-Code Limitation
1. Daily Form Submissions	Automating repetitive data entry into web forms (e.g., timesheets, lead generation forms, survey responses).	Brittle Locators: Dynamic IDs/classes generated by modern frameworks (React/Angular) change on reloads, causing recorded locators to break.
2. Multi-Page Data Scraping	Extracting recurring data like product prices, real estate listings, or tabular reports across pagination.	Lack of Dynamic Logic: Handling complex loops, dynamic waits, or conditional logic (e.g., skip if out of stock) requires explicit code.
3. Regression & Visual Checks	Verifying standard user paths (login, search, basic navigation) function properly after site deployments.	CAPTCHAs & Security: No-code recording tools cannot bypass CAPTCHAs, bot detection mechanisms, or two-factor authentication (2FA).
